

ANNA KIM

Plainview, NY 11803 | ak2825@cornell.edu | 516-800-7768

EDUCATION

Cornell University

Bachelor of Science in Biometry and Statistics, Minors in Data Science and Business

Ithaca, New York

Expected May 2028

- Dean's List (All Semesters to Date)
- **Relevant Coursework:** Data Mining & Machine Learning, Theory of Statistics, Survey of Probability, Linear Algebra for Data Science, Introduction to Computing, Introduction to Data Science, Econometrics, Categorical Data Analysis

EXPERIENCE

Vevo

June 2026 – August 2026

Data Analytics & Research Intern

New York, NY

- Queried, validated, and QA'd large-scale YouTube and FAST viewership datasets using PostgreSQL and AWS, ensuring data accuracy and reliability across analytics pipelines.
- Designed and maintained 3 Looker dashboards for Ad Tech and Pricing, Planning & Inventory teams, developing KPI-driven reporting that enabled data-informed decision-making across cross-functional stakeholders.
- Leveraged SQL to analyze complex datasets and deliver ad hoc insights for the Content & Programming team, translating business questions into actionable recommendations that supported content strategy.
- Developed an end-to-end, data-driven business strategy for a new artist-focused sales initiative by analyzing performance across 500+ artists using SQL, Looker, market research, and survey analysis; developed a custom View Velocity metric and synthesized findings into 3 executive-level recommendations presented to senior leadership.

Allington Lab, Department of Natural Resources and the Environment

January 2026 – Present

Undergraduate Research Assistant

Ithaca, NY

- Contributed to a deep learning land-use classification pipeline built on LSTM and Conv-LSTM architectures by generating high-quality labeled training data through annotation of 300+ agricultural parcels in Uttarakhand, India using satellite imagery, applying visual inference over crop phenology, spatial texture, and field morphology to distinguish active cultivation from fallow or abandoned land
- Assisted in developing PyTorch scripts to preprocess and load satellite imagery tensors for model ingestion, supporting downstream geospatial preprocessing in QGIS and improving training data quality for active vs. abandoned agriculture classification

Cornell Data Journal

September 2025 – Present

Data Analyst

Ithaca, NY

- Analyzed and validated datasets using Python and R, including web-scraped and survey data, communicated findings through data visualizations and analytical narratives for non-technical audiences, and published results as a completed article and presented at a club research symposium

PROJECTS

Beats and Beliefs | *Python, R, SQL, Data Cleaning, GitHub, EDA, Regression Analysis*

- Queried, cleaned, and merged Spotify Top 50 chart data across 62 countries with country-level democracy indices.
- Conducted exploratory and multivariate regression analysis in Python/R to examine regional variation in explicit content and its relationship to freedom of speech measures
- Identified U.S. and English-language dominance in global music consumption patterns, surfacing evidence of globalization bias in Spotify chart data

Froggit | *Python, Object-Oriented Programming, Event-Driven Logic, Debugging*

- Developed an interactive game in Python applying OOP, state management, collision detection, and modular design principles

NBA Player Performance Analytics | *Python, PCA, NumPy, Regression Analysis, Data Visualization*

- Built linear and nonlinear regression models to analyze relationships between NBA player performance metrics.
- Performed PCA via SVD to multi-variable player statistics to reduce dimensionality and identify primary sources of performance variation.

TECHNICAL SKILLS

Languages & Tools: Python, SQL, R, Looker, Power BI, Excel, BigQuery, QGIS, GitHub, AWS, VSCode

Libraries: Pandas, NumPy, Seaborn, Matplotlib, PyTorch
